More people die from lung cancer than colon, rectum, breast and prostate cancers combined. This concerns us greatly at St. Joseph Hospital and is reflected in our efforts to identify and treat lung cancers at the earliest stage possible.

The St. Joseph Hospital Lung Program takes a comprehensive and individualized approach to patient care. In addition, St. Joseph Hospital far exceeds the State and national 5 year survival rates for lung cancer (1999-2004). Using evidence based medicine and cutting-edge technology, we strive to achieve the best patient outcomes possible, tailored to the individual needs of each patient.
