PROGNOSTIC VALUE OF PROSTATE-SPECIFIC ANTIGEN KINETICS IN PROSTATE CANCER PATIENTS WITH BIOCHEMICAL RECURRENCE

Wednesday, October 3, 2007 Antonello Ristorante 1611 W. Sunflower, Santa Ana, CA 92704

PROGRAM OVERVIEW

A focus on the risk of metastatic disease and prostate cancer-specific death after primary therapy

PROGRAM OBJECTIVES

- To briefly review the epidemiology and historical perspectives of prostate cancer in the biochemically recurrent patient
- To examine and explore the prognostic value of PSA kinetics that will be helpful in assessing a recurrent patient's risk of metastases and Prostate Cancer-Specific death (PCSD), and in estimating when a patient may develop metastases
- To understand the relationship between PSA levels, PSA kinetics and bone scan results
- Discuss CAP (Combined Androgen Blockade) as an appropriate treatment option in advanced prostate cancer

FEATURED SPEAKER 6:30-8:30 p.m.

E. David Crawford, M.D.

*Professor of Surgery and Radiation Oncology,
Head of the Section of Urologic Oncology,
University of Colorado Health Sciences Center;
Associate Director, University of Colorado
Comprehensive Cancer Center*

TARGET AUDIENCE

Urologists, Medical Oncologists,
Radiation Oncologists and other interested ancillary professionals
